## #
```

```
#essentially, these datasets are identical
write.csv(rom_ob_truth, 'rom_ob.csv', row.names=FALSE)
```

## **README Info from Claimbuster Datasets**

The ClaimBuster dataset consists of six files, the three used are the following: groundtruth.csv, (22,501 sentences) crowdsourced.csv, (1032 sentences) all\_sentences.csv, (32,072 sentences)

Both groundtruth.csv and crowdsourced.csv files contain the following attributes. - Sentence\_id: A unique numerical identifier to identify sentences in the dataset. - Text: A sentence spoken by a debate participant. - Speaker: Name of the person who verbalized the Text. - Speaker\_title: Speaker's job at the time of the debate. - Speaker\_party: Political affiliation of the Speaker. - File\_id: Debate transcript name. - Length: Number of words in the Text.

- Line\_number: A numerical identifier to to indicate the order of the Text in the debate transcript. - Sentiment: Sentiment score of the Text. The score ranges from -1 (most negative sentiment) to 1 (most positive sentiment). - Verdict: Assigned class label (1 when the sentence is CFS,0 when the sentence is UFS, and -1 when sentence is NFS).

all\_sentences.csv file contains all presidential debate sentences. It has all the features shown above except for "Verdict'.' It also includes the following attribute: - Speaker\_role: It depicts the role of the Speaker in the debate as a participant.

## FACT CHECKED DATA SET

```
ob_rom_factcheck <- read.csv("data/ob_rom_factcheckedset.csv")
```
